

October 2026

Organization and Grading

The tutorial takes place on Wednesday, 10:15–11:45 in RR19 (group 1) and 12:00–13:30 in 3W04 (group 2), starting on October 14th, 2026.

Attendance

Attending the tutorial is compulsory. You might miss the tutorial twice (without giving any reasons). Missing the tutorial more than twice will result in a negative grade (“Nicht Genügend”). If you decide to cancel your tutorial enrollment, you may do so until October 28th, 2026. After this date, you will receive a grade for this tutorial.

Solution of Submissions

There will be nine exercise sheets each comprising 10 points and a group project with 30 points, thus you can obtain a total of 120 points. Please submit your solutions via OLAT every Tuesday 23:59 at the latest and make sure to also mark the solved exercises in OLAT. The written solutions to exercises will contribute 100% to your final grade (if you manage to present at least twice successfully).

Group Work

We encourage working in teams. If you decide to work in teams, please make sure to adhere to the following rules:

- There may be at most three people working in a single team.
- Each member of the team is expected to fully understand, and therefore be able to present, the solutions to the exercises.
- If you work in a team, please add a file called `team.txt` to your submission, listing the names of all team members.

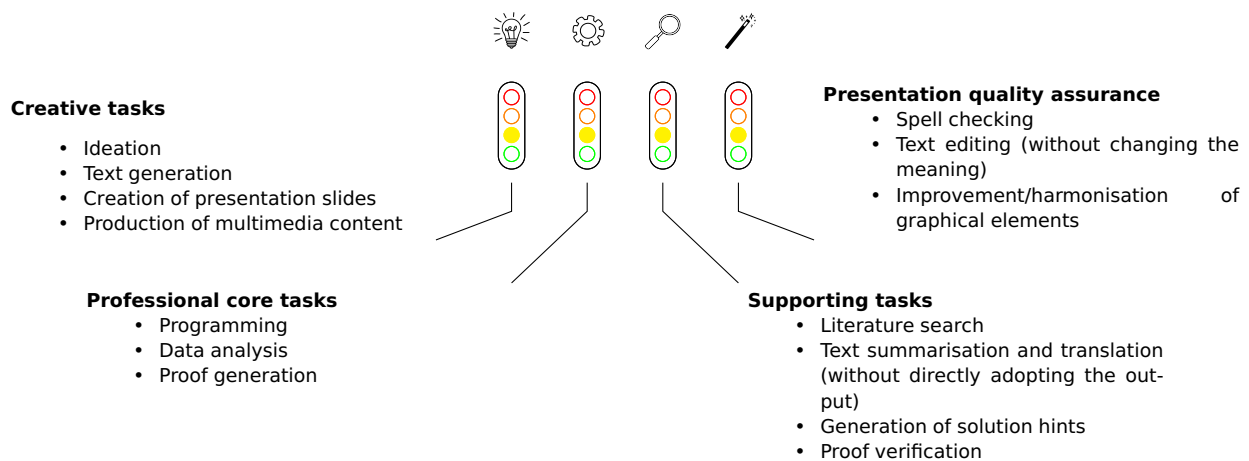

Please make sure that every team member submits their solution and marks their solved exercises via OLAT. A submission by a single member of the team is *not* enough.

Presentation of Submissions

For each exercise you checked in OLAT, you may (randomly) be picked to present your solution during class. You have to present *successfully* twice during the semester to get a positive grade for this course. For your presentation to count as successful, it has to fulfil the following criteria:

- It has to be easy to follow.
- It has to explain all the necessary details.
- You have to be able to confidently and correctly answer questions relating to the exercise you are presenting.

AI Policy

You may use AI tools (such as Claude Code, ChatGPT, Copilot, etc.) for learning and for completing the exercises, including creative tasks, professional core tasks, supporting tasks, and presentation quality assurance. However, you remain fully responsible for everything you submit. In particular, you must understand your submitted solutions and be able to explain, justify, and present them independently during the tutorial.

Submitting AI-generated content that you do not understand is not acceptable. If you are selected to present an exercise, you must be able to explain your solution and answer questions about it. If you cannot demonstrate sufficient understanding of the submitted solution, the presentation will not count as successful and points for the corresponding exercise may be deducted.

Keep in mind that you are presenting the solution to your colleagues; therefore, you should aim to contribute to their understanding. During the tutorial, please take the opportunity to ask questions and discuss matters with your colleagues.

Overall Grade

A positive grade requires (1) no more than two absences, (2) at least two successful presentations, and (3) at least 50% of the attainable points (see Table 1).

$$\text{final score} = \frac{\text{points obtained from submitted solutions}}{\text{total attainable points}} \cdot 100\%.$$

Points	Grade
$\geq 88\%$	Sehr gut
$\geq 75\%$	Gut
$\geq 63\%$	Befriedigend
$\geq 50\%$	Genügend
$< 50\%$	Nicht genügend
